Folder Structure

Within the template you'll find the following folders:

- `/dist` (production ready HTML/CSS/JS files)
- `/` (KIT/SASS/JS source files when using build process)

HTML Structure

This theme is a responsive one and two page layouts built with on UIKit 3.0 so please refer to original docs for more info (<https://getuikit.com/docs/introduction>). The general template structure is the same throughout the template.

The template consists of:

- `soutien/dist/index.html` - Home knowledgebase page
- `soutien/dist/category.html` - Knowledge base category page
- `soutien/dist/article.html` - Knowledge base article page
- `soutien/dist/changelog.html` - Changelog page

- soutien/dist/contact.html - Contact us page with a form
- soutien/dist/download.html - Product download page
- soutien/dist/faq.html - Faq page
- soutien/dist/blog.html - Blog page
- soutien/dist/post.html - Blog post page

Navigation

Header navigation link are located within the <nav> tag, active page link has “uk-active” class assigned.

```
<nav class="border-bottom">
  <div class="uk-container">
    <div data-uk-navbar>
      <div class="uk-navbar-left">
        <a class="uk-navbar-item uk-logo uk-text-small" href="index.html">BASE</a>
      </div>
      <div class="uk-navbar-right">
        <ul class="uk-navbar-nav uk-visible@m">
          <li><a href="index.html">Home</a></li>
          <li class="uk-active"><a href="faq.html">Faq</a></li>
          <li><a href="blog.html">Blog</a></li>
          <li><a href="changelog.html">Changelog</a></li>
          <li><a href="download.html">Download</a></li>
          <li><a href="contact.html">Contact</a></li>
        </ul>
        <div class="uk-navbar-item uk-visible@m">
          <a href="#" class="uk-button uk-button-primary">Get Started</a>
        </div>
        <a class="uk-navbar-toggle uk-hidden@m" href="#offcanvas" data-uk-navbar-toggl
      </div>
    </div>
  </div>
</nav>
```

Footer

Copyright and social icons can be edited inside the <footer> tag:

```

<div class="uk-grid-large uk-margin-large-top uk-flex uk-flex-middle" data-uk-grid>
  <div class="uk-width-1-4@m"></div>
  <div class="uk-width-expand@m">
    <div class="uk-width-auto@m uk-margin-medium uk-text-small">
      <p class="uk-display-inline-block uk-margin-medium-right uk-margin-remove-bott
    </div>
  </div>
  <div class="uk-width-auto@m">
    <div class="uk-width-auto@m uk-margin-medium uk-text-small">
      <a href="https://twitter.com/" data-uk-icon="icon: twitter; ratio:0.8" class="
      <a href="https://www.instagram.com/" data-uk-icon="icon: instagram; ratio:0.8"
      <a href="https://www.facebook.com/" data-uk-icon="icon: facebook; ratio:0.8" c
      <a href="https://www.youtube.com/" data-uk-icon="icon: youtube; ratio:0.8" cla
    </div>
  </div>
</div>
</div>
</footer>

```

Social icon link example:

```

<a href="https://www.instagram.com/" data-uk-icon="icon: instagram"
class="uk-icon-link"></a>

```

All available icons are documented here: <https://getuikit.com/docs/icon>

Contact Form

Soutien comes with forms built it in found in contact.html file. You can copy paste the form to any page you need. If you need to add form input fields full documentation is located here <https://getuikit.com/docs/form>

Awesomeplete Search

Soutien comes with autocomplete Awesomeplete search included, documentation can be found here <http://leaverou.github.io/awesomeplete/> Awesomeplete and demo search JS is included before closing </body> tag:

```

<script src="js/awesocomplete.js"></script>

<script>
  var input = document.getElementById("search");

  input.addEventListener("awesocomplete-selectcomplete", function(e) {
    window.location.href = e.text.value;
  }, false);

  new Awesocomplete(input, {
    container: function (tag) {
      return ".awesocomplete";
    },
    autoFirst: true,
    list: [
      { label: "How do I enable payment gateway?", value: "article.html" },
      { label: "What happens if I clear cache?", value: "article1.html" },
      { label: "Which payment methods do you offer?", value: "article.html" },
      { label: "How long does it take to propagate DNS settings?", value: "article.html" },
      { label: "How can I force SSL certificate?", value: "article.html" }
    ],
    replace: function(suggestion) {
      this.input.value = suggestion.label;
    }
  });
</script>
</body>

```

CSS File and Structure

To modify the look and feel of the template, open the main CSS file located in:

- soutien/dist/css/main.css - Template styles

If you would like to edit a specific component of the site, simply check the table of contents in the main.css template file, and then scroll down until you find the appropriate style that needs to be edited.

If you would like to edit the primary color of the theme you should do "Replace all" color #3dd0ae with the desired one.

Using Build Process

We used CodeKit and Npm for build process <https://codekitapp.com/> <https://www.npmjs.com/>

Run the following npm commands using terminal in root template directory:

- `npm install` (run once to install UIKit and awesomeplete dependencies)

Note: npm must be first installed globally, see npm site <https://www.npmjs.com/>
CodeKit is then used to compile template source files (KIT/SASS/JS) in root folder.

JavaScript

The following scripts are loaded before the body closing tag:

- `soutien/dist/js/main.js` - Contains main UIKit scripts and icons

Detailed Ulkit script documentation is located here <https://getuikit.com/docs/javascript>

Manually Overriding Files

If you decide to manually modify CSS/JS files use /dist folder.

Framework

Template uses Ulkit front-end framework version 3.0.0, documentation is located here:
<https://getuikit.com/docs/introduction>

Google Fonts

Template uses the following Google Web Font:

- Heebo

<https://fonts.google.com/specimen/Heebo>

Support

Support is only provided through our Themeforest profile form at:

<https://themeforest.net/user/pressapps>
